

SG Seminar

# Interdisciplinarity and Funding in Modern Science

Whether scientists can benefit from restricting or broadening the scope of their research still remains largely unexplored.

Drawing on some large data sets on scientific production during several decades, I will focus here on individual scientists's background interdisciplinarity and on the knowledge

to which they are exposed through their collaborators, presenting some recent results on the advantages and disadvantages of interdisciplinarity in modern science.

I will also discuss how funding impacts the way in which we collaborate, and the other way around.

**Professor Vito Latora**

University of London

When: Monday  
02 May 2016  
11:00-13:00

Where: ETH Zürich  
Rämistrasse 101  
HG E 23
